

## **Global Cold Chain Solutions: Cutting Edge Web System for Temperature Tracking**

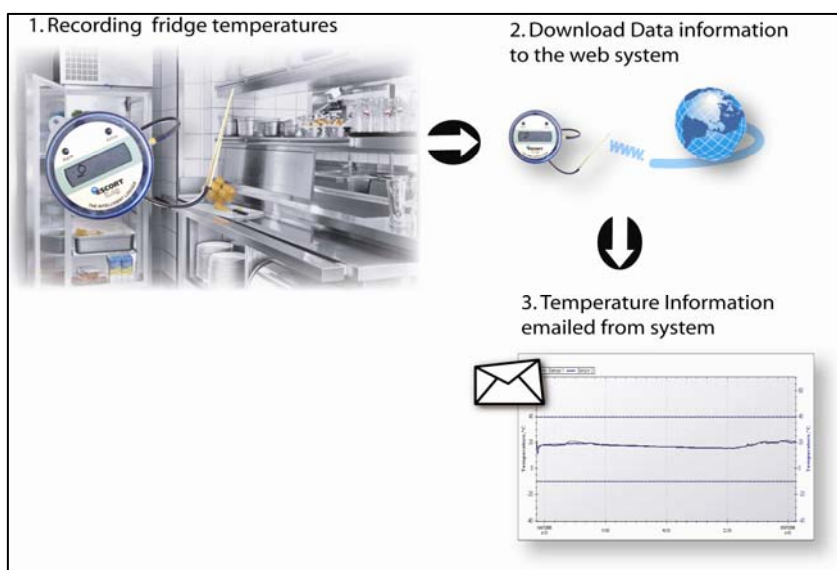

Media Release - January 2007

ABN 48 093 195 352

“EWT” is a web-based temperature monitoring tool for programming and downloading data loggers that are used for in-transit food deliveries, exports, fridge and cool room monitoring, and cold storage facility monitoring.

This unique system provides immediate temperature validation emails containing temperature data that can be automatically sent to Quality Assurance, Logistics, Food Services and other decision makers in an organisation who requiring access to the data.

This system provides a centralized facility to manage HACCP food safety information across multiple sites (e.g. Hospitals - both food service and pharmacy areas).

Major benefits include:

- ➔ Data Security – secure login and password required for users
- ➔ Logistics and Distribution – Immediate viewing of data on arrival of goods speeds up validation process
- ➔ Users and viewing rights controlled by designated Administrator.
- ➔ Digitally Sign temperature data information once downloaded. Users sign with their pre-set digital signatures, providing a legal date and time stamp against the data
- ➔ Data is viewable with any internet connection, username and password.

Currently being used successfully in the Pharmaceutical industry and perishable fruit exports, the EWT system is a powerful tool for both small and large corporations.
